

Dear Neighbor,

Jan. 25, 2021

I am writing to provide you an update on the pipeline construction activity in your area. This work relates to the “620 Major Mod,” which we have shared previous information on. As a reminder of the overall scope of work, enclosed please find a fact sheet providing an overview of the work, a map, and a description of the construction methods.

At this time, our contractors have begun mobilizing equipment onto the Riddlewood Drive worksite to support the direct pipe bore operations. This includes the installation of a steel casing at the site. The installation of this casing may take several days to complete. Casing installation on Riddlewood Drive may be loud at times.

If you are an online landowner and you have any questions, please contact your designated right-of-way agent. If your property is not directly involved in construction (off of the right of way), please contact our community hotline: (855) 430-4491.

Sincerely,

A handwritten signature in blue ink that reads 'Joseph Massaro'.
